

Summer Math Requirements for 6th-8th grade:

Students will work on the online program **ALEKS**. They will take a diagnostic test to target their starting level. From there, students should strive to reach their highest potential. A **minimum** of 50 topics should be completed prior to August 1. Best practices would be to complete at least 10 topics per week throughout the summer. Ideally, we would like students to set a personal goal with their parents and let this be your standard.

***Please note: Students will be provided with their login information by the last day of school.**

[Here is the link to the ALEKS.](#)
